Update on WM Ottawa Landfill Improvement Program

Dear Neighbours,

As you may have noticed, there has been a significant amount of construction activity at our Ottawa Waste Management facility on Carp Road. These activities have included: expanding our landfill gas collection system to control odours, applying the final cover to our south slope, improvements to our poplar tree plantation and landscaping to the front berm along Carp Road.

The purpose of this update is to inform you, that as part of these site improvements, we will be placing top soil on areas around our site that now have a permanent cap placed. This activity is in preparation for seeding, that will take place beginning in the first week of September.

The application of the topsoil will begin this week and will continue until the end of August. There may be odours related to this activity, as part of the ingredients in our topsoil is processed biosolids to help accelerate plant growth. To help reduce the potential impact of the odours, we will be operating our high pressure misting system on a 24-hour basis until this operation is finished. This misting system will help neutralize, not mask, the odours. Further to this, we will not apply any topsoil on weekends including Friday's & statutory holidays. Once the topsoil application is finished, we will be seeding these completed sections starting the week of September 3, 2007.

If you have any questions or comments or would like to come in and tour our facility, please call me at 613-831-3566 or by e-mail at mwalters@wm.com.

Yours truly,

A handwritten signature in cursive script that reads "Michael Walters".
