**Re: WM Ottawa Waste Management Facility – Quarterly Report – January 1,
2009 – March 31, 2009.**

Dear Mr. Davis,

As per Condition 2 of the Provincial Officer's Order 7160-79THQR, Waste Management of Canada Corporation has prepared a report that details all odour contingency plan activities for the period of January 1, 2009 to March 31, 2009.

Enclosed Flares

The two (2) enclosed flares were fully operational throughout the reporting period. The flares were shut down from time to time to conduct maintenance. The flares were restarted as soon as the maintenance work was completed in order to reduce the shut down time.

We have received a C of A to operate the temporary flare on October 1, 2008. This flare is required to ensure proper flaring capacity as we are adding more landfill gas (LFG) wells to the collection system.

Landfill Gas (LFG) Collection System

The LFG Collection System was monitored on a daily basis. The LFG field was balanced on a weekly basis by WMCC technicians. The data collected was entered into the Landfill Gas Management System (LGMS) for analysis by the LFG operations manager.

No new LFG wells were installed during the period. As of the end of the reporting period, the LFG Collection System consisted of 158 LFG wells.

The installation of the electrical and dewatering systems to install pumps in the LFG wells on the North and South Slopes was completed.

A total of 7 pumps have been installed and powered. The remaining pumps will be installed in April.

A total of 21 vertical wells outside the landfill footprint and 1,600m of horizontal collector around the landfill footprint were also installed. This will help to optimize the LFG Collection System.

Capping

No final capping was completed during the reporting period. Daily cover was applied to the working face and interim cover was applied to zones where landfilling would not take place over the following month.

Cap Inspection

The landfill slopes were inspected on a daily basis and repairs were scheduled. Repairs were conducted when the area could be safely accessed.

Beanie Capping on top of the Landfill Footprint

The beanie cap design was completed by Comcor Environmental. An application was submitted to MOE on March 31/08 for their approval. The final Certificate of Approval for the beanie cap was released by MOE on December 10/08. Construction of Phase 1 of the beanie cap will be completed this summer.

Emission Survey

No air emission surveys were conducted during the reporting period.

Planned Construction and/or maintenance activities report

The planned construction and/or maintenance activities reports were posted on the WMCC website on the first day of each month.

We are available to meet with you to discuss any additional questions or concerns you may have.

Yours truly,

Rémi Godin, P.Eng.

Sr. District Engineer – Eastern Canada
